L. s. 4
+*+ This Work contains every Element of Practical Navigation, with all the Modern Improvements rendered perfectly familiar and easy; at the same Time that every Attention has been paid to keep the Whole strictly Scientific, and dependent on itself throughout. The Properties and Uses of Hadley's Quadrant are amply explained, and applied to the Discovery of the Latitude and Longitude, by various Methods. The Journal is minutely exemplified by Reference to a Sett consisting of Twelve Precepts, by the Help of which, any one, though unacquainted with any Part of Navigation, may, without farther Assistance, in a few Days acquire the Method of keeping a Reckoning. The Important, though too-much neglected Branch of Nautical Knowledge, Surveying of Harbours and Coasts, is treated in the same concise and open Manner; the requisite Instructions being not only arranged in Order, but the Precepts are likewise illustrated by a Drawing and particular References for every Part of the Process. And an extensive Collection of Tables is added, consisting of the common Logarithmic Tables, natural Sines, and Logarithmic Solar Tables, Traverse Tables to a Distance of 300 meridional Parts, Latitudes and Longitudes of Places, &c.
